WEEKLY REPORT

Dear Mahmoud_Ayman

In the below Table you will see a specified table that includes the good, the bad & the improvements that can be done on your Classification Task

Correctly Done	Can Be Improved
• **Apply Scaling** • **Using robust model** • **Encoding**	• You can apply other techniques for outlier as transformation (log), capping, fill by median (try and determine the good one) • Handle multicollinearity using drop cols with high vif or pca (not necessary to increase performance, the integrity will be) • Encoding using one-hot, label or manual encoder as type1:1, type2:2,… • You can use more robust models as random forest, xgbooost, adaboost, .. • You can use grid-search for more hyper tunning • You can apply cross-validation to know genera performance of model on all data • Split data into train and test before any preprocessing • **Handle Imbalanced** • **You can add more features as total_members, total_night, percent_can((p_c)/(p_c + p_not_c)** •
